

SEED-SAVERS PORTABLE SOIL TESTING

Seed Savers Network, as one of the leading ecological agricultural organizations, is now offering soil testing services at very affordable prices. We are using a modern portable device which makes it easier to reach out to the farmers who would like to access the service. With good samples of the soil, the device gives accurate results within minutes. The results include the following:

- Essential minerals which are missing in the soil
- Organic fertilizer which can be applied to boost soil productivity
- Profitable crops which can be grown in the soil
- pH level of the soil

BENEFITS OF USING OUR DEVICE

- Promotes organic agriculture and therefore good quality products
- Gives instant results thereby saving time
- Provides the accurate status of the soil and the recommendations needed to improve its fertility
- Is cheaper and more accessible than other methods of soil testing
- Suggests alternative crops which can be planted in the same piece of land to increase the diversity in the farm.
